### INTERNAL WASH ROBOT

www.alkonesuperclean.com sales@alkonesuperclean.com 966564642814 / 966591008032

Automatic Trailer and Container Internal Washing System is he revolutionary new system for washing and sanitizing the interiors of refrigerated trailers, containers and railroad cars. The robot sprays the cleaning detergent spreading inside the surface at its first move to the end of the trailer. On the return move all the pre-sprayed surface is washed with high pressure water and the dirty water is swept out again with high pressure water sprayed from the special nozzles under the robot. Another cycle can take place for sanitizing. This action is fully PLC Controlled automatical and takes a little time.

# WASHING SOLUTIONS FOR MILITARY TANK AND HEAVY INDUSTRAL VEHICLES

We provide solutions for washing special military or industrial vehicles that cannot be washed by brushing operation. We use the latest high pressure water and chemical technologies in our solutions. By the use of chemicals, the dirt and mud on the vehicle is smoothened and swept out by the use of special nozzles and water cannons.

# TRAIN PROGRESSION PULLING SYSTEM

The Train Progression Pulling System is designed to move the trains and vagons at constant speeds lower than the speeds that can be driven by its own engines. With some special mechanical without electrical equipment the wheels of the train are trapped by the system and after the pulling action is completed, the wheels are released. The equipment speed is under the control of an invertor and can be controlled manually. It can also be controlled by the washing systems main computer.

#### EKO-AQUA TREAT VASTE WATER TREATMENT AND RECYCLING UNIT

EKO-AQUA TREAT is a single, self-contained water treatment unit, which enables the wastewater to be re-used after it has been treated.

Almost 80% of used water can be re-used. Depending on the waste water condition and the treated specifications to be required the water is treated by phisical, chemical or biological methods, then passes through sand and active carbon filters. The system has an automatic device for backwashing. This process completes the water treatment, removing any residual traces of pollution, before the water passing on to sanitary or to be used again at vehicle washing.

#### TURN KEY SYSTEMS

DBF not only manuactures and markets systems for washing the vehicles but with all the knowladge we have even the on the washing industry and also on the other industries we can design, manufacture and install custom designed, complete turn-key systems due to our customer requirements in several industries.

# HYDROWASH COMMERICAL AND SPECIAL VEHICLE WASHING SYSTEMS

Additional to the Ultima series the **Hydrowash** series **Automatic Vehicle Washing Plants** can combine the softener action with the high pressure and the brush wash.

The high pressure system supports the cleaning of the critical areas even on vehicles with difficult shapes like tanker, silo, garbage trucks and similar. According to the washing requirements, the unit can be equiped with up to 7 brushes different length and shape and pressure to be supplied by different power pumps and used with even rotating or reduced angle power nozzles.

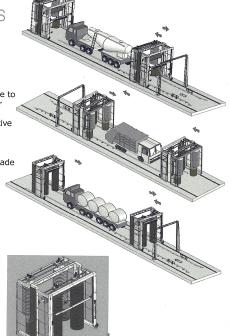

For the washes that no brush could be used there also is the alternative of **Hydrowash Brushless** model which has no brushes but washes only with softener and high pressure water.

The **Hydrowash** model range allows large choice of programmes to wash all standard vehicles. Additionally, it is possible to make tailor made designs for the customer needs.

### **ULTIMA BUS -TRUCK WASHING SYSTEMS**

ULTIMA Commercial Vehicle Washing Systems are the optimal solutions if you are washing commercial vehicles like busses and trucks and even the cars. The vehicle stops and the machine troley is moving over the car in these systems. A large range of vehicles and even cars can be washed with the best cleaning action with the ULTIMA Series. For the difficult vehicle shapes and cleaning requirements, the ULTIMA could be equiped with different configurations more than a standart three brush machine. By the pressure control of the top brush motor the controllable brussing effect on the vehicle is possible. Also, by the power relay pressure control of the side brush motors sensitive washing for different type of vehicles is secured. As our Ultima models are of modular type, the optional accesories can be mounted easily without a need of an extra space.
